Mohammed Sab Sagari

DevOps Engineer | Kubernetes & Platform Engineering

mdsab123sagari@gmail.com | linkedin.com/in/mohammedsab | mohammedssab.github.io | Pune, India

Professional Summary

DevOps Engineer with 8+ years in Linux administration and Kubernetes platform engineering. Run production and staging Kubernetes clusters (Talos Linux, Proxmox) with GitOps delivery via Argo CD and Flux CD, CI/CD on GitHub Actions and Gitea Actions, Ansible automation, and Prometheus, Grafana, and Loki observability.

Professional Experience

Shaurya Technosoft Pvt. Ltd. Mar. 2026 – Present
DevOps Engineer *Pune, IN*

- Design and maintain CI/CD pipelines across **GitHub Actions** and **Gitea Actions** for 15+ microservices; cut build and test durations by **65%** by provisioning dedicated runners with persistent Gradle and BuildKit layer caching.
- Manage 3 Kubernetes clusters (production and staging) across bare-metal, Proxmox, and immutable **Talos Linux** (30+ nodes); standardize declarative GitOps rollouts using **Flux CD**, **Argo CD**, and **Kustomize** overlays.
- Configure **Kubernetes Gateway API**, implementing Layer 7 ingress routing, TCP listeners for IoT telemetry traffic, PROXY protocol handling, and cert-manager automated TLS certificate lifecycle management.
- Harden container security by migrating API and client workloads to **Chainguard Wolfi** base images running as non-root, shrinking image sizes by **37%** (215 MB to 134 MB) and reducing critical base-image CVEs.
- Optimize Docker build pipelines and package caching by deploying and managing **APT Cacher NG** proxies, accelerating Ubuntu dependency downloads across development and CI environments.
- Migrated secondary Kubernetes cluster from Calico CNI + MetalLB to **Cilium eBPF**, deploying L2 announcements to deprecate MetalLB and enabling deep packet observability with **Hubble**.
- Deploy and operate centralized observability across 20+ servers using **Prometheus**, **Grafana**, native **Grafana Alloy** agents, and **Loki**; tune **Alertmanager** expressions to reduce false-positive alerts and route notifications to **Microsoft Teams**.
- Automate host provisioning, runner deployments, and rolling cluster node upgrades using **Ansible** playbooks orchestrated via self-service **Semaphore UI** execution templates.
- Administer production **PostgreSQL** and **MySQL** databases: user and role management, **PgBouncer** connection pooling, routine backups, replication checks, and storage volume expansion.
- Maintain developer platforms and container security workflows using **Gitea**, **Harbor** (with **Trivy** vulnerability scanning), **SonarQube**, and **OpenBao / Vault**, automating repository dependency updates via **Renovate Bot**.
- Troubleshoot production incidents involving database availability, replication, storage capacity, Kubernetes workloads, and application performance.

LetsReflect Nov. 2022 – Feb. 2026
DevOps & System Administrator *Pune, IN*

- Administered hybrid Linux infrastructure across **AWS (EC2, Route 53)** and on-premise Proxmox environments, sustaining **99.9%** platform uptime.
- Designed and automated **GitHub Actions** and **Gitea Actions** CI/CD pipelines, accelerating release cycles from bi-weekly manual rollouts to on-demand daily deployments.
- Containerized 10+ monolithic applications into Docker microservices and deployed Kubernetes clusters using **kubeadm**, **Helm**, and **Argo CD**.
- Implemented centralized logging and monitoring using **Prometheus**, **Grafana**, **Loki**, and **Uptime Kuma**, reducing incident detection and diagnosis time.
- Hardened application secrets management by deploying **HashiCorp Vault** with AppRole authentication, centralizing secrets management across container workloads.
- Configured reverse proxies using **Nginx**, automated Let's Encrypt SSL/TLS renewals, and managed edge firewall rules.
- Automated routine server provisioning, security patching, and package management using **Ansible** playbooks and Proxmox virtual machine templates.
- Maintained self-hosted engineering toolchains including **Gitea**, **SonarQube**, **Nexus Repository**, **Harbor**, and **Vaultwarden**.

Maharashtra Knowledge Corporation Limited (MKCL) Sep. 2018 – Oct. 2022
Information Technology Fellow (Systems Administrator) *Pune, IN*

- Administered enterprise Linux (RHEL, Ubuntu) and Windows Server environments, supporting educational platforms serving **100k+ users**.
- Configured and tuned **Apache HTTP**, **Nginx**, **Apache Tomcat**, and **IIS** web application servers.
- Managed enterprise databases (**MySQL**, **MSSQL**, **MariaDB**, **MongoDB**), performing automated backups, role-based access control, and query optimization.
- Automated routine server patching, log rotation, and scheduled backup workflows using **Jenkins**, **Ansible**, and **Rundeck**, reducing manual operational overhead.
- Diagnosed and resolved system bottlenecks, memory leaks, and network connectivity issues through in-depth OS kernel log analysis and performance profiling.

Technical Skills

Kubernetes & Containers: Kubernetes, Talos Linux, Docker, Helm, Kustomize, Cilium (eBPF), Hubble, Gateway API, Ingress, cert-manager
GitOps & CI/CD: Argo CD, Flux CD, GitHub Actions, Gitea Actions, Jenkins, Renovate Bot
Configuration & Automation: Ansible, Semaphore UI, Proxmox VE, Bash Scripting
Cloud: AWS (EC2, Route 53)
Databases & Storage: PostgreSQL, PgBouncer, MySQL, MariaDB, MSSQL, MongoDB, Replication, Backup and Recovery
Monitoring & Observability: Prometheus, Grafana, Grafana Alloy, Loki, Alertmanager, Uptime Kuma
Security & DevSecOps: HashiCorp Vault, OpenBao, AppRole, Harbor, Trivy, SonarQube, Chainguard Wolfi, Let's Encrypt SSL/TLS
Web & Networking: Linux Networking, Nginx, Apache, Tomcat, Reverse Proxy, Firewalls
Operating Systems: Ubuntu Server (22.04/24.04/26.04), Debian, Talos Linux, Linux, Windows Server
Developer Platforms: Gitea, Sonatype Nexus Repository, Harbor Registry, Vaultwarden

Education

Savitribai Phule Pune University Pune, IN
Master of Science in Computer Science (Part-time) *Sep. 2021 – Oct. 2023*
Yashwantrao Chavan Maharashtra Open University (YCMOU) Pune, IN
Bachelor of Science in Computer System Administration *Aug. 2018 – Jul. 2021*
